

# Increase Your Availability & Efficiency With Comprehensive Valve Services

## Let Us Get to Know Your Plant

Whether you are looking to make your plant more reliable or trying to better understand your assets, we have the local Caribe-based sales/support team and U.S.-based Emerson-certified technicians to help you increase plant efficiency. In fact, our team may already be familiar with your facility, having had a presence in the Caribbean for over 15 years.

Our approach starts with a plant walkdown to determine the condition of your most critical assets—control valves and/or safety relief valves. From there, we can provide an initial set of maintenance recommendations and photos explaining the reasoning. A practical, consolidated recommended spare parts list will also be provided so that you can optimize your local inventory. Beyond that, we can conduct additional diagnostic testing to use for further analysis, or as input for a preventative maintenance plan aligned with your business needs. During our discovery, if we see something that needs adjustments or immediate attention, we can attend to that right away, if requested.

**We offer our walkdowns at no cost to our customers because the more we know, the better equipped we are to help you.**

Data Gathering & Immediate Maintenance Needs

Discovery of Present Issues

Preventative Maintenance Program

Fix the Problems

### Asset Walkdown — FREE

- Determine Valve Scope: Control Valves/Safety Relief Valves
- Visual Inspection/Data Gathering
- Repair of Immediate Maintenance Needs
- Spare Parts Analysis

### Walkdown Analysis — FREE

- Observe/Photograph Visual Issues
- Recommendations Based on Criticality Prioritization
- Repair/Replace/Upgrade/No Action

### Valve Diagnostics Tools & Technologies
